

Title: Optical fiber network planning

Description

MCNS has undertaken a consultancy project for the initial optical fiber network planning and technical specifications proposals on behalf of EYDAP in Attiki, Greece.

The projects' immediate goal is the initial planning of a 700 km optical network interconnecting the overall water supply network of Attiki Greece with all available tele-services, tele-control, cameras and remote access to all electromechanical and building infrastructure.

MCNS project technical deliverables, among others, are:

- initial optical network planning
- Optical network protection loops with emphasis on minimum path
- MW technology protection paths for difficult mountainous areas for critical infrastructure points of telematics and tele-services
- Preparation of BoM
- Preparation of technical requirements
- Preparation of RfP
